Subject: FW: Estimate of a DV for PM10 for the La Casa Monitoring Site?

Hi Josh,

Sorry I was not that clear below on my request for help on the background DV for the La Casa monitor. Below is an example from the Commerce City PM₁₀ monitor, to be used in PM hot-spot modeling, and I would be looking for similar data from the La Casa FRM

monitor:

EPA's November, 2015 PM Hot-spot modeling guidance ("Transportation Conformity Guidance for Quantitative Hot-spot Analyses in PM_{2.5} and PM₁₀ Nonattainment and Maintenance Areas") notes the following in section 9.3.4 *24-hour PM₁₀ NAAQS*:

Calculating Design Values and Determining Conformity

The 24-hour PM₁₀ design value is calculated at each receptor by directly adding the sixth-highest modeled 24-hour concentrations (if using five years of meteorological data) to the appropriate monitor value for the 24-hour background concentration from three years of monitoring data, based on Exhibit 9-6.¹⁵³ Exhibit 9-6: Monitor Value Used for Design Value Calculation

Number of Background Concentration Values from the Monitor	Monitor Value Used for Design Value Calculation
< 347	Highest Monitor Value
348 -695	Second Highest Value
696 -1042	Third Highest Value
1043 -1096	Fourth Highest Value

PM₁₀ data from the Commerce City monitoring site is provided in the table below:

EPA/OTAQ Table of Data

Year	N	Highest value	2 nd highest	3 rd highest	4 th highest
2013	357	144	97	93	89
2012	308	113	86	76	75
2011	351	82	65	64	61

"N" = the number of days of valid data recovery.

Subject: Estimate of a DV for PM10 for the La Casa Monitoring Site?

Hi Josh,

Thanks for being willing to review the attached air quality monitoring information. Based on what's contained in the the three Excel spreadsheets, can you calcualate an *approximate* DV for the La Casa site for PM10 for 2013-2015?

Much appreciate the help!

Hi Tim,

I pulled down data for La Casa from EPA's air data webpage, attached – note, the only change I made to these spreadsheets was to sort the sheet based on column K “pollutant standard.” If you want the original downloads, go to:

<https://www.epa.gov/outdoor-air-quality-data/interactive-map-air-quality-monitors> and then launch the map app, zoom in on Denver, and click on the La Casa monitor.
